Fibre Cement Cladding

This fibre cement cladding range has both European technical approval and CWCT testing.

Comprised of a combination of reinforcing fibres, additives, cement and water, these boards are available in standard sizes including 3050mm x 1220mm x 8mm and 2520mm x 1220mm x 8mm, along with the option to create made-to-measure alternatives for individual projects. This range of fibre cement panels hold an A2 fire rating, in accordance with **EN13501-1**.

Five colour ranges are available, with options that include subtle natural shades, and almost all RAL colours can be produced. Fibre cement panels are suitable for a new construction or refurbishment project. In the case of a renovation, fibre cement panels offer an advantage due to their reduced thickness, meaning thicker insulation layers can be applied.

Fibre cement cladding panels combine seamlessly with a number of other facade materials, including facing bricks and slate and can be installed using a variety of systems:

— Screws

Panels can be attached with screws (wooden or metal) to the support structure.

— Rivets

Panels can be attached to the metal support structure using rivets.

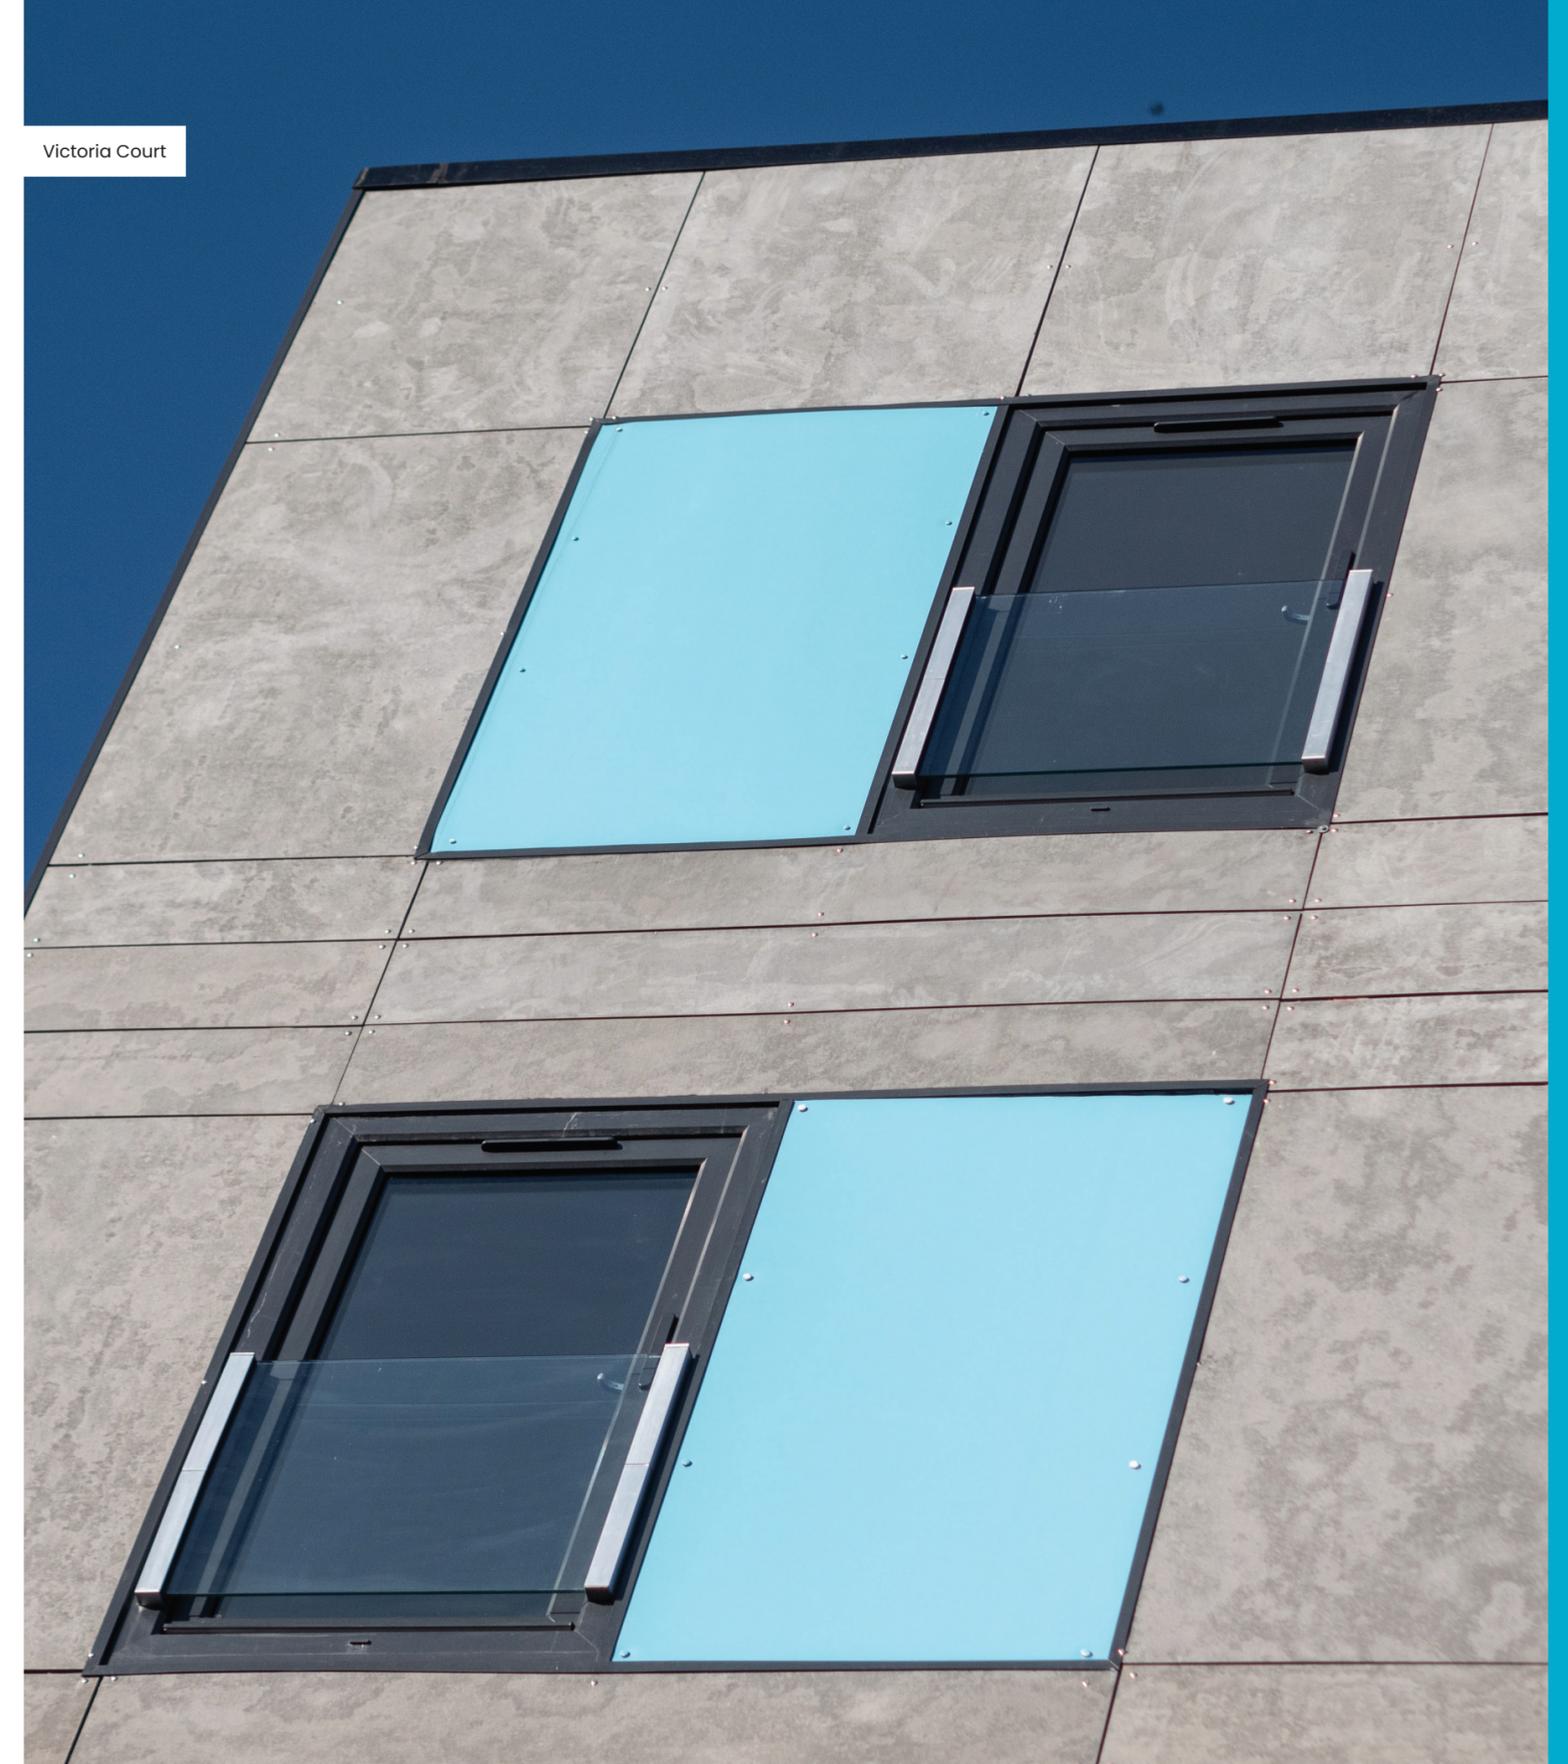

— Invisible mechanical fastening

Panels can be installed using an invisible mechanical fastening system, where the backs of the panels are fitted with fastening points, in which panel hooks are placed with a tension-free anchor.

The surface of fibre cement boards may show variations in tone, appearance and coloured spots/flecks which adds to natural aesthetics of the material. The porosity allows the panels appearance to change with wet weather conditions and when dried out return to the original colour/tone. Each panel is naturally unique, and it is recommended that over large projects, panels are mixed from pallets.

Victoria Court

Fibre Cement Cladding

Colour Ranges

Puro Plus

A lightly sanded facade panel with a natural fibre cement soft cloudy appearance. Panels are air-dried and have no additional coatings applied. The raw beauty of natural cement patinas with age.

Natural Grey

Decoboard Pure

The same soft cloudy appearance as Puro Plus but finished with a transparent or semi-transparent coating. Available in three shades of grey with a vibrant and natural appearance. These products require cut edges to have an edge protector applied prior to installation.

Gale

Burst

Thunder

Decoboard Classic

Fibre cement facade panels manufactured using the finest raw materials and finished with 3 coats of UV-resistant acrylic paint. A smooth finish giving a facade a timeless and modern, trendy look. Available in a range of standard colours.

White

Mid Grey

Ornimat Essentials

Fibre cement panel fabricated to project specific sizes during the manufacturing process. These are then finished in a durable and attractive UV-resistant two-component polyurethane paint with a matte finish. Panel edges are squared and coated with the same colour finish as the visible face. Available in a range of standard colours. An approved project specific panel cutting list is required from the customer prior to ordering this product. At the beginning of the manufacturing process, panels are cut from construction board with dimensions 3085 x 1235mm or 2535 x 1235mm. The panel price includes for up to 15% based on the two standard panel sizes.

Terms & Conditions
<ul style="list-style-type: none"> - Orders > 550m² include single load delivery to the order party's fabrication facility. - Single orders < 550m² to the order party's fabrication facility will incur a delivery surcharge. This will be kept to a minimum and calculated on an individual basis. - On the rare occasion panels need to be delivered directly to the end user customer/site, a location specific delivery charge will be calculated on an individual basis. - Decoboard Pure panel products require cut edges to have an edge protector applied prior to installation. Please purchase this in addition and apply to all cut edges following cutting. Instructions for this procedure are available from Wienerberger. - Directional panels have a sanded surface and this must be accounted for during design, optimisation and fabrication. Arrows on the panel's protective film or rear surface indicate the direction in which they have been sanded. The sanded grain direction runs parallel with the long edges of the panel. Panels can be installed with the grain in the same direction to create a consistent appearance or in different directions to create a more random facade. This is the designer's choice. - Ornimat panels are cut to project sizes during the manufacturing process and then coated so that the panel's decorative face and edges are colour matching (maximum panel size possible 3070 x 1220). Up to 15% wastage on standard panel sizes is inclusive in the price. Wastage >15% will be charged in addition. A signed Wienerberger SVK panel cutting and optimisation schedule is required when ordering this product. A final project price will be provided once this is complete in approximately 5 working days. Cutting and drilling fabrication services are available. Minimum order quantity 50m². - Ornimat – it is recommended that additional panels are ordered to allow for incidents, such as damage during installation. Further small panel runs following fulfilment of the original order will incur additional charges. - Decoboard Inspiration and Ornimat Inspiration bespoke colour finishes will be priced on a project by project basis. Bespoke colour samples will be created for sign off by the customer prior to a material order being placed. These samples typically takes 6-8 weeks to produce. Project samples may be chargeable depending upon the project circumstances at a rate to be confirmed by your local Taylor Maxwell representative. Minimum order quantity 50m². - Customs declaration charges will be added in addition.

*For start-up costs and lead-in times, please speak to a local Taylor Maxwell representative.

The background of the entire page is a photograph of a modern building's exterior. The building features a grid of dark grey panels. Two windows with white frames are visible, set into the grid. The sky is a clear, bright blue. In the top left corner, there is a black rectangular box containing the company name in white text.
